

EARTHRINGS™

VSD MOTOR BEARING PROTECTION

“An Industry Standard”

All over the westernized world “Shaft Grounded Electric Motors” are a necessary standard off the shelf item.

Today's electric motors that run off Variable Speed Drives have such a drastically reduced life-span, that all leading motor manufacturers have included a Standard off the shelf range of electric motors specifically for use on Variable speed drive application (VSDs).

Even manufacturers that are adding insulated housings as standard (due to the large increase in VSD related motor failures they are experiencing), are aware that insulated housings are not 100% effective and have all added Factory Fitted “Shaft Grounding Motors” to their product range.

Factory Fitted by Manufacturer:-

Baldor

Brook Crompton

Century Motor

Küenle

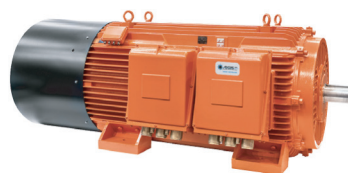

Toshiba

Fuji Electric

GE Energy

EMOD

Leeson

Marathon

US Motors/Nidec

WEG

TECO Westinghouse

T-T Electric
